

Business Analyst(Contingent)

Description

As a Business Analyst, you will assist the business teams in defining requirements and delivering technology solutions to address various business needs. The projects that you will participate in will drive improved customer satisfaction, foster better communications with both internal and external customers, and will deliver significant value to the client and its customers.

Responsibilities include:

- The maintenance of project plans, requirements documentation, and aiding internal clients.
- Analyze business needs and work with engineers and designers to formulate solutions.
- Develop and document the business requirements, design specs, help prepare test plans.
- Leads business teams and cross-competency teams completing tasks related to application design, documenting and managing customer requirements throughout the development lifecycle. This includes requirements definition, requirements analysis, process analysis; requirements change management, use case and business process modeling, logical system design and high level estimating.
- Works collaboratively with business representatives, Project Management and various teams to develop and implement the specific technology and architecture necessary to deliver business solutions.
- Lead or mentor non Business Analyst team members to perform Business Analyst functions.
- Lead the resolution of project-related issues.

Where appropriate, business liaison on day-to-day business needs and production support

This is a 6-12 month contingent position.

Qualifications

- Experience in functional design for large scale technology implementations
- Ability to understand business issues/challenges and identify business solutions through specific technologies
- Well versed in SDLC methodologies
- Experience in participating/leading JAD (Joint Application Design) sessions
- Ability to work with key stakeholders in developing business requirements, functional design specs, use cases, test cases, process flows, and UI schematics (wireframes)
- Ability to work collaboratively with business representatives, Project Management and technical teams to implement specific technology and architecture necessary to deliver business solutions.
- Experience in requirements tools such as Requisite Pro desirable
- Knowledge of UI and user-experience concepts desirable
