

We need a developer or developers proficient in the latest PowerBuilder as well as .Net/Visual Basic. They must be senior level/experienced, be dedicated to good documentation, and committed to accepted coding standards. It is also desirable that the developer has experience developing testing/assessment software as both an analyst and programmer.

This work will extend and complete some maintenance work for the currently operational system/application used to collect, scan, validate, score, store, report, and generally manage the results of large-scale, standardized assessments. The current system uses Sybase 15.n as its data store and has both batch and online components. These are written in a combination of PowerBuilder and .Net applications making extensive use of PowerBuilder .Net.

This work should begin no later than Wednesday, November 11, 2009 and must be completed by May of 2010.
