

This position will work closely with the client to develop data conversion programs from to case management software system. This individual will provide the programming and documentation necessary to support the conversion effort.

Experience/Skills:

Informix SQL

Stored procedure and 4gl

Database conversion experience

Unix shell scripting experience would be useful

Process documentation

Court knowledge or direct experience with CORIS would be a plus

Project Description:

Design and create Informix tables to mimic the legacy system's data structures (staging tables).

Develop and test the procedures to populate the raw data from the legacy systems into Informix staging tables.

Develop a process to consolidate the data from the two legacy systems into a single set of data.

Identify the appropriate data element correlations between the two legacy systems and the CORIS system.

Identify the appropriate data value mappings between the two legacy systems and the CORIS system.

base structure.

Assist in the execution of the data conversion.

Respond with action plans to post conversion issues that arise.

Please submit resumes (and hourly rates) for this position by email attachment no later than 5:00 PM October 23, 2009.
