

Senior Engineer -

Description

Our Client is looking for a talented and energetic engineer for Web Client development. Overall responsibilities include developing significant new functionality for the client, as well as maintaining and extending the client's existing functionality. This client is a rich internet application written in Adobe Flex, Javascript, and HTML; it reaches millions of users worldwide in many languages. This position provides an opportunity to demonstrate world-class technical leadership and to be part of a dynamic and energetic engineering environment.

Qualifications

Key Responsibilities and Challenges

- Independently design, write, and support software that covers significant areas of business logic in a web client product.
- Identify key areas of usability and user interaction design within your assigned areas, and work with product managers and other department leaders to bring these user interface solutions into the product.
- Troubleshoot and debug new and existing code modules written in Flex, Javascript, HTML and other forthcoming web technologies.
- Resolve software issues reported by external and internal users.
- Assist in quality assurance activities, including code reviews and writing unit and interaction test cases.
- Develop and maintain up-to-date industry development skills in Web-focused client development. Teach others in the group your expertise areas.
- Execute within a team using the methods of Scrum.
- Demonstrate creative, innovative, and cost-effective ways to meet requirements and deliverables.
- Accountable to an agreed development schedule
- Work as an effective team member, acting as a catalyst for team improvement and overall team productivity. Embody a high degree of motivation and can instill this quality in others.

Background and Qualifying Criteria

- Degree in Computer Science or equivalent with 5+ years of related industry experience, with background in user interaction and user interface design.
- Experience in designing web oriented products that receive many hits per day.
- Intuitive sense for designing easy to use user interfaces.
- Significant experience in coding Web client products in HTML, Javascript, and Flex for cross-browser environments.
- Familiarity with Web Services technologies such as SOAP or REST.

- Familiarity with agile development practices, ideally Scrum.
 - Experience with software development on Linux workstations and Linux servers.
 - Experience in quality assurance processes and practices.
-
- Track record of successful delivery of at least one major commercial product or system.
 - Ability to independently create significant areas of well engineered code.
 - Ability to independently identify and solve software engineering problems.
 - Proven ability to be self directed and able to make priority judgments in daily work.
 - Demonstrable ability to maintain up-to-date skills, evolving through development paradigms.
 - Proven ability to deliver the highest level of skill, quality, and timeliness of work while keeping abreast of changes in the overall field of Web Client technologies as well as user interaction and user experience design.
 - Experience with all phases of the product cycle, including design, implementation, QA, release, and support.
