

Senior Intel/AMD Engineer-

## Description

We are looking for an expert in server deployment and operating system support. We are looking for a professional to work as a Engineer in a rapidly growing and developing environment, an industry expert, the best of his/her trade, an individual with experience maintaining a large Intel/AMD server shop with multiple operating systems both dedicated and virtualized. This individual would be responsible for helping set the direction, defining the policies and creating the procedures used in a global enterprise to provide support for our customers.

The Engineer would be responsible for computing infrastructure in the area of Intel/AMD servers and is responsible for designing, implementing, and maintaining these core resources. Within a given discipline, this position is responsible for integrating the many different technologies and system types. The systems engineered by this position serve all of the employees. Many of the systems are required to be up and available 24 hours a day, 7 days a week.

The Engineer interacts at a technical level with business partners and providers who are dependent on Engineering. Product Management, RAMs, Project Management,
