

Small Applications Developer

1 contingent, 3 month, mid-level position. may go longer

Our Small Apps Developers are charged with designing and building small web-based applications for internal use. We need well-rounded developers who can personally own and drive the entire life-cycle of a small web application. Our Small Apps developers talk with clients, identify needs, design solutions and then code, test, deploy and support those solutions. We need customer-focused, design-oriented developers who are passionate about delivering real value, real fast.

Qualifications

Applying candidates must have each of the following:

- Ability to communicate effectively with non-technical clients
- Ability to identify client needs
- Ability to design small, simple, effective web-based web applications
- Technical aptitude to work in Microsoft Visual Studio, ASP.NET, C#, HTML, CSS, Javascript, and SQL Server
- Ability to effectively test self-produced code
- Desire and ability to provide great customer support
- A relentless drive for results

Exceptional candidates will have one or more of the following:

- Solid experience developing ASP.NET-based web applications using C#
 - Extensive experience designing, developing and delivering web-based applications
- 1 contingent, 3 month, mid-level position. may go longer**
