

This position is in Salt Lake City, Utah

This software engineer will lead a Natural Language Processing (NLP) Engine project, which is based on an open-source NLP solution. This engineer will oversee the development team members to ensure that the goals of the project are met, including but not limited to:

- Incorporating the elements of open-source solutions and solutions to which the client has unlimited rights
- Adapting the NLP engine to the database and hardware environment to optimize performance

Candidates for this position should have the following qualifications:

- Minimum BS degree(s) in Computer Science or related scientific field
- Two or more years experience leading a development team
- Five years experience in Java programming, or MS degree(s) in Computer Science and three years experience in Java programming
- Experience in natural language processing
- Experience desired in some of the following: Adobe Flex, Microsoft Windows SQL, Sun MicroSystem's MySQL, Eclipse development platform
- Superior analytical skills
- Excellent verbal and written communications skills
- Ability to interact effectively with management, users, and other programmers
- Ability to work as part of a development team
- The ability to effectively manage your time and projects
- Honesty, reliability, punctuality

Full time position. We will consider applicants with a range of experience. Compensation will be based on the candidate's skills and experience.
