

User Experience Designer

User Experience Engineer, Product Engineering Division

This position will work to make each application more intuitive, simple, and powerful. If you are passionate about solving difficult problems, distilling complex processes into intuitive systems, and designing effective solutions, this job is for you.

Qualifications

Background and Qualifying Criteria

- Knowledge of usability and what makes good user experience
- A keen eye for design, layout, topography, color and space
- Experience designing user interfaces for advanced applications and websites
- Strong background with HTML/CSS, JavaScript
- Experience with design tools like Photoshop, Fireworks etc.
- BSCS, HCI, Graphic Design or other design related degree or experience
- Minimum 3 years web application interaction design experience
- Experience creating high and low fidelity prototypes
- User-centered design methods experience including contextual inquiry, task analysis, cognitive walkthroughs, usability studies
- Self-motivated, deadline-driven, detail-oriented
- Strong communication skills (oral, written, graphic design etc.)
- Experience working in an Agile environment
- Must be able to point to an on-line design portfolio

Key Responsibilities and Challenges

- Translate product requirements into a best-of-breed user interface design
- Apply user-centered design processes to create high quality user experiences
- Develop user personas, scenarios of use, interaction models, low and high fidelity prototypes as necessary to meet specific project needs
- Iterate on designs based on the results of usability testing and customer walkthroughs
- Help to define long-term user experience strategy
- Contribute to a culture of innovation and teamwork
