

# Intel Systems Administrator –

## Description

We are looking for a qualified Systems Administrator for our Windows and Netware servers to help make our production team a success. As a part of our team you will help to deploy server solutions to meet customer requirements based on current and future server platforms. You will help to create, update and follow best practices, standards, operational documentation and baselines for hardware, domain and operating systems.

To be a successful member of this team you will need to have excellent troubleshooting skills that will be put to the test in diagnosing problems with Windows, Netware, VMWare and Intel/AMD based hardware. You will also be asked to help with application performance troubleshooting. You will be expected to help review, design and implement process and tools that will improve our production efficiency and customer experience. Ability to articulate to all levels of management in clear, concise understandable terms is critical.

## Qualifications

### **Mandatory Skills/Experience**

- Bachelor's degree required, preferably in computer science or information technology field
- Minimum of 3 years system administration experience.
- Experience in installing and configuring Windows and Netware servers.
- Must exhibit excellent problem troubleshooting skills.
- Ability to adapt and learn new concepts and new software products.
- Strong organizational, time management, oral and written communication skills. Able to work under stress and handle multiple critical priorities.

### **Desirable Skills/Experience**

- Experience using Windows clustering services.
- Experience with backup and restore technologies, specifically Tivoli Storage Manager.
- Experience with HP/Compaq line of servers including rack and blade server
