

## Senior Directory Engineer-

### Description

We're looking for an excellent Sr. Directory Engineer who has in-depth experience with Novell's eDirectory and IDM products as well as Microsoft Active Directory. Directory Engineers run several projects simultaneously and are expected to assist others in integrating their products with our directory standards and settings. There will be some hands-on associated with the position, but there will be more requirement gathering, documenting and process creation.

### Qualifications

#### Required Skillset:

- \* In-depth experience with Novell eDirectory 8.7 or later and IDM 2.x or later
- \* In-depth experience with Microsoft Active Directory 2000 or later
- \* In-depth experience with certificates and Certificate Authorities
- \* Good knowledge of provisioning and de-provisioning directory objects and privileges
- \* Good positive verbal and writing communication skills
- \* Team oriented - respectful, sharing, able to teach others effectively
- \* Able to lead projects
- \* Honorable, unquestionable integrity, no guile, good judgment and above reproach
- \* Practical experience with auditing, monitoring and reporting tools
- \* Good troubleshooting skills - understand traces, logs and tools

#### Desired Skillset:

- \* Knowledge to use JDBC, SQL and other database interfaces
- \* Able to use Javascript, Powershell, XML, Perl scripting
- \* Broad understanding of IT architecture, operations, processes, services and integration
