

# Senior Software Engineer –

## Description

This is a senior software engineering position on web development projects for Seminaries and Institutes, working under the direction of the software development manager. This position leverages experience as a seasoned technical professional and software developer. Must have a demonstrated ability to quickly learn and apply new technologies, contribute to system architecture and design, and build stable, scalable and responsive applications.

## Responsibilities:

- Design, code, and debug both new and legacy systems
- Create and perform unit tests
- Participate in coding and code reviews
- Be accountable for agreed upon development schedule
- Assist in quality assurance measures (code reviews, unit and system testing, etc.)
- Work with minimum supervision
- Work well independently as well as in a team
- Communicate well with product management and customer support

## Qualifications

### Qualifications:

- Bachelor or master's degree in computer science or a related field.
- 10+ years hands-on experience designing and developing scalable, complex web applications.
- Expert in .NET web development at the systems level
- Strong relational database experience (Oracle, SQL Server, MySQL)
