

Senior Web Developer –

Description

As a Sr. Web Developer, you will function as a key member of the Development team in creating innovative rich-client web applications. Duties involve aspects of design, engineering, and interaction with Human Factors and QA to implement genealogical software products. The product space involves Petabytes of data, complex object relationships, scalability, and integration to multiple data subsystems and repositories. This is a technically challenging position working with one of the largest information repositories in existence. Finally, making this information accessible via rich customer experiences to a large customer base is key.

The ideal candidate is a superior engineer with very strong UI skills. This person is innovative yet able to accept direction with a great attitude and work ethic.

Qualifications

Responsibilities:

- Engineer, code, and debug both new and legacy systems
- Create and perform unit tests
- Participate in coding and code reviews
- Be accountable for agreed upon development schedule
- Assist in quality assurance measures (code reviews, unit and interaction test case creation, etc.)
- Work with minimum supervision
- Work well independently as well as in a team
- Communicate well with Customers, Human Factors and Product Management

Qualifications:

- 8+ years hands-on experience in designing and developing scalable, complex web applications using object-oriented programming (preference to Java)
- Expert in Web technologies (AJAX, Http, JavaScript, CSS, DHTML, XML, SSL, Cookies) and cross browser development.
- Excellent Rich UI web application development experience (Ajax, Flash, Flex)
- XML, SOAP, REST technologies
