

Sr. Technical Program Manager –

Description

We are seeking a Technical Program Manager with passion, energy and drive who is willing to take the lead in developing leading-edge technology solutions. Leading a team of software developers, architects, testers, systems engineers and project managers, the Program Manager's technical decisions and direction are what will drive products and features through to completion. Working throughout the organization, Program Managers translate user requirements into product features and create functional specifications. They then prioritize and deliver on those features, by providing technical leadership as well as project direction to engineering resources. Program Managers are energized by a challenge and are willing to take responsibility for the success of critical IT solutions.

Job Functions:

- Drive and own the requirements of the project from inception to delivery.
- Drive development process to complete solution according to commitments.
- Work with line managers to assemble project teams.
- Evaluate vendors and packaged solutions for buy vs. build decisions.
- Provide technical leadership during solution development and deployment.
- Develop, maintain and execute the master project plan and rollout schedule.
- Manage development of required documentation.
- Lead development teams in prioritization of work products. Lead iteration and release planning.
- Communicate detailed functional requirements. Collaborate with project team to identify feature details and technical design.
- Work with stakeholders to gather, clarify and document project requirements.
- Clarify and drive project commitments; establish and maintain clear chains of accountability.
- Provide continuous assessment of project risks and mitigation approaches.
- Lead project reviews to assess schedule, solution architecture and process.
- Facilitate communication and negotiation within the team.

Qualifications

10+ years experience in IT related field. 5+ years managing software development efforts. Thorough understanding of all domains of IT security.

Track record of successfully executing complex projects — particularly enterprise-level applications.

Excellent analytical skills. Ability to think critically and decompose complex problems into coherent technology strategy and solutions.

Excellent verbal and written communication skills. Ability to negotiate and positively influence people at all levels of the organization.

Excellent analytical skills. Ability to think critically and decompose complex problems into coherent technology strategy and solutions.

Strong, broad technical background required. Must have a solid understanding of architectural

and system concepts. Will need to work with and provide leadership to development, infrastructure, database and architecture teams.

Preferred:

- · Experience delivering custom built software applications.
- · Experience with archival storage and digital preservation strategies
- Experience with digital records management
