

# Web Engineer (JAVA)

## Description

We are hiring a Web Developer to help design and code web-based applications and websites. This individual will work on the next generation of very public Internet applications such as websites, leadership applications, and content-rich websites delivered in multiple languages, across multiple delivery channels including web, mobile, and RSS. This individual must have the ability to rapidly investigate and evaluate new technologies, and implement them into sound architectures. They must be able to work on a highly-productive team. They must be highly productive working with designers in producing front-end web pages.

This position will utilize the following technologies (but not limited to):

- Java/JSP/JSF/XQuery
- JavaScript/Jscript
- Spring, Hibernate, JPA
- Ajax
- XML, CSS

Ultimately, the success of the individual engineer is directly tied to the success of the engineering team. We need people that can focus on delivering high-quality solutions, quickly.

## Qualifications

- Exposure to a broad range of Java technologies, and able to contribute meaningfully to technology and product decisions.
- Must have 5 or more years of relevant experience
- Significant experience developing web applications and content-rich websites is preferred.
- Worked on large-scale enterprise application
- Able to comfortably apply and recognize design patterns in determining algorithms, design constructs and in making architectural decisions
- Proven ability to estimate the time to develop software features and then to deliver on that estimate
- BS/MS/PhD in CS or equivalent.
- Strong Java skills and object oriented design experience.
- Experience in database design and SQL.
- Experience with Portal Servers and Content Management are a plus.
- Knowledge of session management, object relational mapping, XML web services, and agile development methodologies desired.
-
